The four Ks of Peter Petz

Enclosed with this November issue of *Games & Parks Industry* is a supplement dedicated to Peter Petz Production. This special edition, which only in part contains previously published information, is explained by the huge success of the first supplement. We have thus chosen to present a version that is new and improved in many aspects, above all regarding the format (pocket size), with twice the number of pages dedicated to the many attractions created by Petz, which, for one reason or another, were not part of the first edition and have now been added for completion.

One important new element is the inclusion of the CD, which can be browsed in two different modes: multimedia, and interactive.

Why then have we provided two media, paper and CD ROM, to present the same products? While it may seem an extravagance, it is on the other hand a far-sighted decision, coherent with changing times and demands. Don't it said that artists live longer antennae, because they know how to capture trends and changes in advance? With this decision Peter Petz wants to help the consumer/customer enter his world more directly. Enter it, feel it, observe it even more closely, with the help of enlargements, and have a complete view of the results achieved in over 30 years of business. Every artist dreams of being successful, of having their value recognized. There are few however who reach this goal without being tied down by compromises and responsibilities.

without renouncing, in some way, their values.

Peter Petz is one of those who has made it. To the three traditional 'K's that are said to inspire the life of the German family - 'Kirche', 'Küche' and 'Kinder', that is church, kitchen and children - he has added a fourth, the 'Karussell', a machine that combines festivities and family.

This K then completes the concept of a society that is not just made up of responsibilities, but also, and why not, pleasures.

And if these pleasures hark back to the past, well and good. The fascination of what lived and continues to live in the present grows when filtered by the sensitivity of an artist. As is demonstrated by Peter Petz, and his products.

The art of Carousels

Having entered the world of the entertainment almost by chance, Peter Petz has been able to impose his own unmistakable style on his carousels, amusements and kiosks, which while reflecting the look of the last century, offer decidedly modern technological solutions.

THE KING OF THE CAROUSELS

Below: Peter Petz directing the assembly of a carousel.

Below right: Aa figure carousel. The small rider mounted around the central axis is a classic of the genre. It is small, but with a characteristic design.

Long dark hair, thick beard, round glasses, the look of an ex-fighter, Peter Petz seems anything but a German. This is true also in his character: Peter is a true spirit, an easy-going, friendly gentleman.

An artist (it is no coincidence that he is a German, one of the most creative signs of the modern) who has used his innate seriousness as the winning card in his profession. When else in the world could you find on the one of the third millennium, in the midst of the technological age, someone who chooses to produce carousels, rides, stands and other gaudy equip-

ment in god's nineteenth-century style?

Nevertheless his fame has spread beyond Europe's borders, with his attractions being found in Belgium, Denmark, Italy, France, Ireland and Sweden, as well as Japan, Mexico, Singapore, South Africa, Korea and the United States. Even Michael Jackson, just like Michael Jackson, travelled all the way to Germany, the home of Petz, to see some rides for his private fairground in California. And Keith Haring, the American artist famous for his graffiti in the New York subway, also worked in co-operation with Mr Petz to create a carousel.

So, just who is this Peter Petz? Born in Augsburg in 1945, he started painting at the age of 11, and still in his teens he worked as a decorator for games parades and playgrounds until, when on completing high school, he enrolled in courses of painting and sculpture at the Academy of Fine Arts in his home town.

"It was in 1967", explained Peter Petz, "that a travelling showman visited the school

Below: Peter Petz painting a carousel.

The art of Carousels

A complete park has been set up in the Port of the Netherlands in The Netherlands.

looking for young artists interested in decorating his side. This was my first concrete contact with the world of parks."

These days marked the beginning of a series of creative experiences in the entertain-

ment sector for Peter Peet, interspersed with his frequent travels. His commitment and professionalism were rewarded so much that he decided to abandon his studies and devote his will full time to this new passionate business. For 17 years

The most classical

The story of the Neustädter Isenm Carousel, perhaps the most elegant and distinguished of the series, as well as being the most traditional, is certainly worth telling, as it in some way reflects the philosophy of Peter Peet. Peet in fact managed to acquire an original carousel from 1889 from a German showman and then reproduced the Isenm to the same excellent yet superior technical office and gave it back to his customer - that was born the Neustädter Isenm Carousel, a "Isenm" among which proves the loyalty of the German firm to real traditions from the past.

As well as its traditional central decoration, this model also offers the alternative of a steam engine, invented by Peter Peet as a homage to the English engineer George who in the last century brought this type of power to the world of entertainment, as well as offering a nostalgic element of the atmosphere of 19th century.

This model too is available in both fixed

and transportable versions, can hold up to 36 passengers and rotate between 3 and 11 meters in diameter.

The Neustädter Isenm Carousel is a "Isenm" carousel with a steam engine, invented by Peter Peet as a homage to the English engineer George who in the last century brought this type of power to the world of entertainment from 19th.

The art of Carousels

The most unusual

This unique carousel is very difficult to find. Featuring a giant teddy bear the figures also really bear, speak and sing. The attraction called Teddybear Karussell has a diameter of 3.5 metres and a height including the bear, of 5.5 metres, and is also available in a smaller-mounted version, with a diameter of 3 metres (without cage) or 3 metres (with cage).

The attraction, which is coin-operated, thanks to its different versions can be ideal for travelling fairs, amusement parks, Fairs and shopping centres.

His life began
a personal journey
a thousand times
Carnival to Berlin
Four Feet

from 1900 to 1910 Peter performed a number of tasks for travelling fairs and amusement parks ranging from sign-writing, to illusory cinema, to the decoration of buildings and attractions such as walk through shows, glass houses and beer tents. He also worked as a free lance designer for all German fairground rides manufacturers (Hans Zinner, Thier, and others all Scherzbergel) and other Italian companies such as Giannini and SDC.

It was 1915 however that saw the begin-

One of the most small
amusement
arranging in the
Berlin's main square
old world

ning of a new era for Arthur Peto. This was the year in which he released his first carousel. One month in diameter followed the year after by a second model, four metres in diameter, and which for its originality received an important prize from IAAEF. Peto himself explains the reasons for the immediate success of his carousel:

"Until then nobody was interested in rides exclusively for children. German showmen only wanted big attractions and believed it was useless to invest in such a small customer base. We were the first to realize that there was a market niche for small medium-sized children's attractions (including carousels) to be set up in pleasant surroundings which are also suitable for adults."

Since then, Arthur Peto has never stopped producing new rides every year, almost all of

The art of Carousels

which are available in travelling and permanent versions. Rider it is worth emphasizing that Peto has always designed and manufactured in his workshop. From the initial design to the final finishing touch, everything carefully controlled by Peto himself and his trusted staff even though because of the large size of the company subcontractors are used.

While carousels are undoubtedly the company's strong points there is also an immense range of other attractions in its catalogue which just like the carousels, reproduce the baroque and antiquated aesthetics of the traditional carousels. Peto's wheeled picnic ships and trains, coin-up mini carousels, swing and walk-through-like, strength tests and wheels of fortune as well as kinetic restaurants, cafeterias, displays and stages. The structures are invariably standing out for their designs, colours, shapes and sizes which elegantly recall the atmosphere of the past. If you don't know that they are Peto products, they are in fact often mistaken for real antiques, especially as each Peto ride has the date of manufacture as a year in the 19th century. Why? Well, this artistic licence is one of Peto's trademarks that is to give date his products by a century 1900 instead of 1985, 1990 instead of 1995, and so on, and one reason to make these attractions look wood Peto has been forced to opt for Douglas and pine wood just for special circumstances, such as those he made for Harrod's of London. The real structure are covered with plastic then painted to give them a new wood-like look.

The subjects and the decorations are inspired by the world of the circus (the strange clowns and monkeys in costumes) or by the world of fantasy in the case of some metaphorical figures from the end of the 1800s early 1900s. Drawing spheres tinted by projects around fairs. You see, these animals such as elephants with wings etc.

As we have already mentioned one of the main reasons behind the success of Anker Peto is the range of his proposals in 19th century style. The fascination of a Peto carousel is even greater when placed next to fairs and attractions in the same style, as Gardaland there is an entire area of the park composed exclusively of attractions and structures produced by Anker Peto, while in Marbella in Spain, near a shopping centre

The most "aesthetic"

One original carousel is that which reproduces the remarkable style of Mark Marry, an American artist famous for his graffiti in the New York subway. It was Marry himself who designed and painted this ride, in which the traditional horses have been replaced by shapes which reproduce the typical figures of the artist's work. This attraction, which was part of the famous Adler Heller "Luna Luna" fair made up of attractions designed by artists such as Dalí and Oldenburg, highlights the continued search for style, the consistency and the creativity of the German firm.

Below: in the work of art, the carousel has been designed and painted by the American artist Mark Marry himself.

The art of Carcusels

High here is an example of Peter Pearl's complete parks which come in a wide range of models.

The latest Peter Pearl ride is also suitable to protect programs such as the one that was prepared on this subject and can be used for selling an amount of drinks while the rider is being used inside a shop. The attraction is ideal for family entertainment centers which can be used as an entertainment or other activities offered by the business manager.

belonging to the El Corte Inglés chain in San Sebastián, a park covering four 4 000 square meters completely created by the Guinness firm.

For creativity, in San Peter Pearl's only strong point, he can also count on technical genius and an intuition for the latest technology which has even been seen in Guinness Book of Records as incredible six times including records for the world's largest fully portable double deck carousel which is a travelling model holding 50 passengers and which can be totally folded-up and transported.

Other extraordinary creations include his massive travelling cafe restaurant - 11 meters in diameter with a capacity of 120 people - and the *RollerCarrousel* the only carousel in the world which works on roller skis.

Not just nostalgia for the past, but also the ability to apply the most advanced technology to attractions which, in style and ease to details, seem to come directly from the last century, ideas that despite their decidedly retro look, offer the reliability and the safety of products created in the year of the year 2000. ■

The art of Carousels

To allow everyone the possibility of enjoying a Ferris attraction, Mrs. Geli Ferris operates alongside her husband with her own firm, Pleasure for All, which deals with the hire of rides and structures from the Ferris range.

Mrs. Geli Ferris is a woman whose design and skills bring fun to 17th-century vehicles and exciting modern Ferris wheel structures.

PLEASURE FOR ALL

As impossible couples in their private life, the Ferris are also partners in business, following the opening, around ten years ago, of Pleasure for All. This has been in its fact run by Mrs Geli Ferris, who, faithful to the origins of Arthur Ferris, aims at bringing the entertainment offered by the Ferris experience of attractions to as many people as possible.

From a complete park set up to the supply of a single

element for promotional initiatives or a child's birthday party, Pleasure for All has deals with every detail, providing personnel not only for the installation, operation and maintenance of the rides, but also group leaders in contrast to those of the event. It is a business proposition on the setting up of an outdoor or indoor park. Pleasure for All is able to provide a complete service, including the organization and marketing aspects, such as the printing and distribution of free tickets in advance, guaranteeing an accurate service which, down to the smallest detail, is all provided by the same firm. ■

The art of Carousels

By looking closely at the habits of the Petz family, we have discovered the clear link between Peter's private life and his artistic and professional decisions.

A PARTY IN PERFECT PETZ STYLE

The inseparable mix of art and Petz craftsmanship their vision lies when it comes to building a traditional carousel. Get some inspiration for your arena, and the whole family comes to the party around an old-fashioned horse show.

In the life of Peter Petz, artistic decisions go hand in hand with personal ones. In that both are inspired by his

way of looking and interpreting reality. His love for the past, for its baroque shapes and its solid traditions, doesn't inspire him only in the construction of his 19th-century style carousels and attractions, but also in his relationships with his family, governed by his attachment to solid values and traditions which for many are now obsolete. His attachment goes to the more formal elements of tradition also led Peter and his wife Catalina last May to combine their solid union by holding a spectacular ceremony, featuring kinds, attractions and decorations inspired by the unmistakable Petz style. The couple pre-

measuring
up to 11
metres in
height, this
carousel is
the biggest
fully portable
double-decker
carousel; the
road model is
provided with an
integrated trailer.

The art of Carcouels

Taking a ride with ladies and knights

The idea for this attraction, which is the world's first transportable, hand-cranked Ferris wheel, and so much entered the 1995 edition of the Guinness Book of Records, came to Peter Pett while studying the old master manual dealing with various gears, who used a foot pedal to keep a large stone in motion. In the late Middle Ages, royal glass-maker gendres had similar Ferris wheels making use of cranks to provide the constant power needed, which has been reduced by Pett to 5 Nm only.

The charm of this attraction lies in its construction, which is made out of wooden water wheels. Four gendres, each capable of holding two adults or three children, hang between two water wheels like balloons, ballast swallows hanging

from the gendres guarantee a smooth and pleasant ride, as they can counteract differences in the weight of the passengers. There is four cranks on the periphery of the wheel get it up to full operational speed, while the operator can maintain the duration of a ride between 100 and 150 seconds by means of an axial foot pedal crank located on the base of the Ferris wheel. The ride has a central gear as well as forward and reverse gears, a brake and an emergency brake. It is mounted on a double axle trailer, weighs 2,500 kilograms and is 4 metres high, 3 metres wide and 3 metres long.

Peter Pett's Medieval Hand Crank Ferris Wheel is one of the attractions of his Medieval Fairground bar of rides, which also includes three carousels, different stands, wheels of fortune, a hi roller, a swing model, a tea table, a terrace and a hand-powered Kermisride ride.

Medieval hand crank Ferris wheel

The Ferris wheel is another ride belonging to Pett's complete Medieval Fairground. It is made up of four gendres, each capable of holding two adults and three children, hanging between two water wheel like wheels.

The art of Carousels

Mini Parks

This amusement park entered the Guinness Book of Records last year as the first complete leisure park that is set up and operated by one person. It includes a Lightbox Carousel, a mini Ferris wheel, a mini train ship, a roller track, a popcorn machine, Jukebox, Lights and various equipment.

Clean energy? Yes, please!

Refused in June '90 Solarousel is the world's first solar powered horse carousel. The ride is operated by a series of solar panels (PV3000) installed on its canopy. They run an electric motor transmitting about 4000 Watts.

The model is a small one - only five horses

are placed on it - but the solar energy source can be used for even larger carousels and other amusement rides.

The working targets of this model are malls, public houses, gardens as well as events, that is permanent installations, but it can also be mounted on a trailer.

Solarousel is maintenance free and ecofriendly. It is made from steel and transparent fibreglass reinforced plastics, combined with glossing acrylic aluminium colours and a permanent light system powered by about 200 halogen lighting points.

The digital electronic energy control system for all components makes its service free and allows for optional auto operation too.

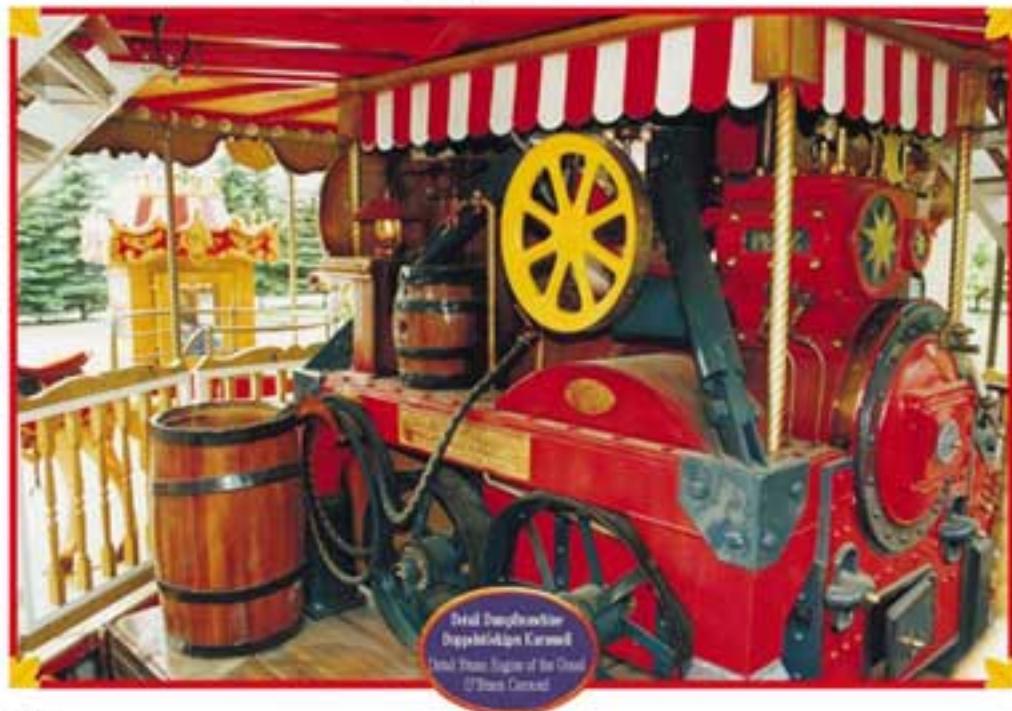

Solarousel

Solarousel is the world's first solar powered horse carousel. It is operated by a series of solar panels installed on its canopy.

The art of Carousels

IN THE KINGDOM OF AMUSEMENT DESIGN

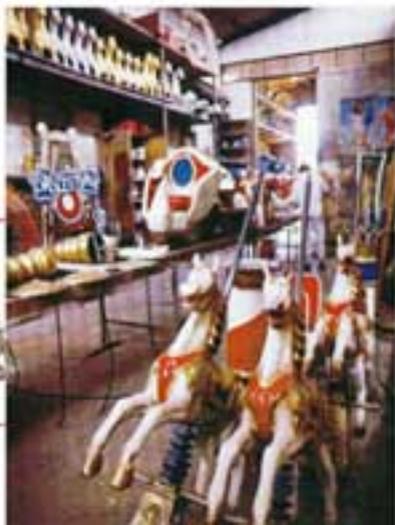

Paul Cameron stands in the tower of the building where Peter Peck lives and works. Above: the mall area.

On the right: the workshop where Peter Peck designs and repairs carousel rides. It's full of sketches, tools, parts for sale and used castles in 1970. Peck wears a white apron over his shirt.

When you really say that his life revolves around carousels, as most his horses is circular in shape and has the typical look of an Art Deco

carousel, it even has its own miniature park, a unique mix of amusement in which to immerse yourself in the search for inspiration.

The room which is used as an office and workshop says a lot about the artist and his way of working; more than any attraction

The art of Carousels

On the left is a horse carousel made for shipping. Another Peter Peter ride is still all over the world.

Below: This lion is one of the many sculptures that are featured inside the Peter Peter garden.

builder for first of all considered himself an "amusement designer" rather than the traditional old deck and many other typical elements which he used to have in his offers. There are new unusual designs, looks about cartoons, decorations and a series of subjects which the artist is currently working on, among which he often finds it difficult to name. Isn't that a bit comically or surprising? Certainly not, the point is that Peter Peter is more experienced, and just plain, and to do this he needs to use all of his creativity on a 1 to 1 scale. It may seem a strange and impromptu way to work, yet the results prove otherwise: behind their original and traditional look, Andler Peter attractions are real masterpieces of technology, six of which

have even entered the Guinness Book of Records.

A great satisfaction for an artist who must deal not as an experienced painter, a real out-

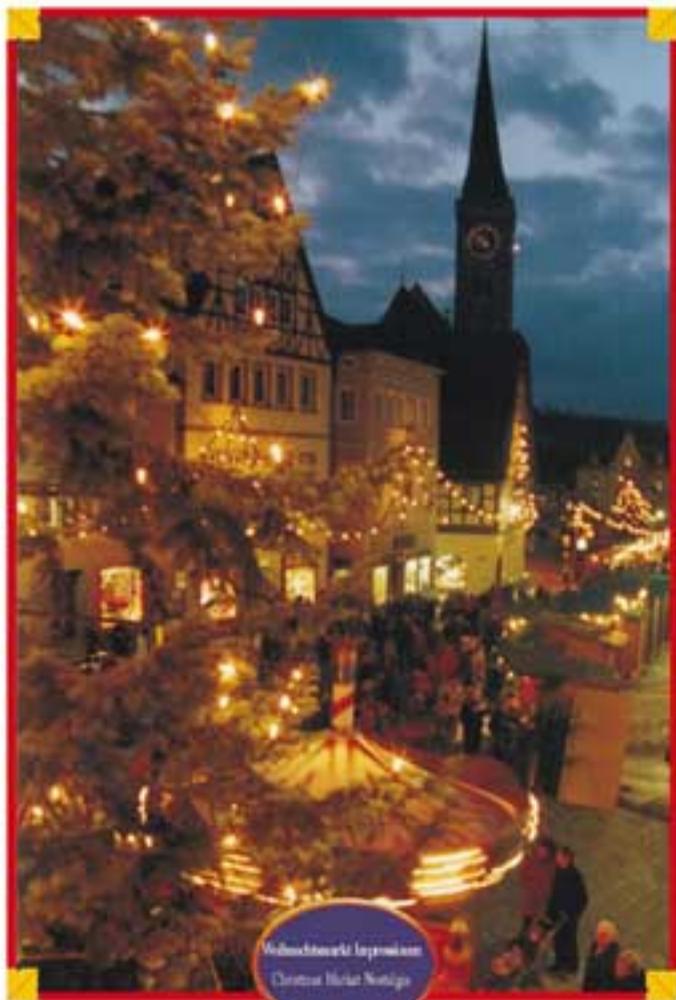

side in respect to the world of parks, he himself explains his feelings with words that come up perfectly fit upon and independent spirit: "It gives me much more satisfaction to work for showmen, than to paint pictures to hang on the walls in a bank." ■

The automatic mini-carousels: the smallest carousels made by Anker-Peter

The art of Carousels

SMALL PIECES OF NOSTALGIA

Among the vast range of products manufactured by Anker-Peter Pits, special mention should be made of the *World's Contemporary Carousels*, series, a line of kiddie rides which combines the look of the traditional carousel with the versatility of an extremely compact attraction: 1.20 metres in diameter, a height varying from 1.3 to 3.1 metres, and a weight of 200 kilos. Their reduced size in fact makes these coin-operated miniature carousels ideal not only for travelling fairs and amusement parks, but also for games centres, FECs and shopping centres.

The themes and decorations of these original rides are further proof of their versatility: from an animal theme, accompanied by signs and illuminated, with different types of covers, different subjects, and finally the option of choosing between a traditional round design

like an original steam engine which strengthens the ride's link to the past country.

A steam engine, naturally with decorative functions only, is also fitted to one of the most interesting models of kiddie ride produced by Anker-Peter Pits, that is the one with a *Steam Train*: this is in fact an original adaptation of the most traditional rides to the fashions and tastes of the children of today, who won't be able to resist the temptation of climbing on these amazing plasticine animals.

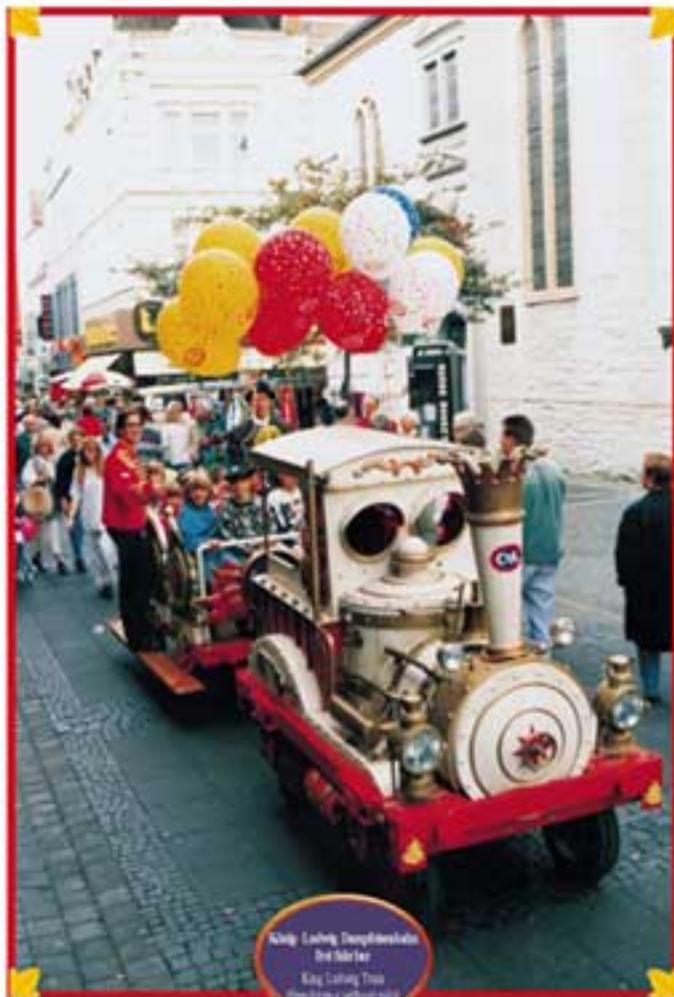

The many optional accessories available for this and other models, include a special small stand trailer (weight: 600 kilos), making transport operations simple. ■

PLEASURE FOR ALL

Vergessen für alle, unter diesem Motto erfüllen wir
 Kinderträume, lassen Sie sich in die wundervolle
 Welt von der Jahrhundertwende entführen!

Pleasure For All ist Ihr Spezialist für exklusive
 Promotion- & gelungenes Family Entertainment.
 Pleasure For All - Das ist Vergnügen für alle.

Für alle Kinder, für Eltern, die ganze Familie,
 der Hochzeit von Dr. Seuss, beim Einlaufen,
 für Firmenjubiläen, Neuwahlungen, Geburtstagen,
 Messen, bei Ausstellungen und zur Verköstlichung etc.
 Kom für Kinder und Eltern, die sich von romantischen
 Jahreszeiten begeistern lassen wollen

Sie bei Peter Petz sind für ein Stadtkind an eine Jubiläumsidee oder eine Sonder-Motiv mit nachhause bringen!

We bringen Ihnen den kompletten Jahreslauf der Jahreszeiten, mit allen vier Jahreszeiten. Einzigartig ist nicht nur das die Stück kann mehrere mal, sondern auch, daß alle Aufgaben handgezeichnete Unikate sind

numerieren und limitieren. Edition- und Einzelnummern sind jeweils von Peter Petz, Art Director/Designer, Künstler, und weltberühmten Porzellanherren der Königlich Preussische Porzellan-Manufaktur Meissen gefertigt worden. Seine Arbeiten wurden ausgezeichnet mit internationalen Awards, außerdem 1. Urangegraben im Gütern Buch der Weltweit. Dieser Porzellan und Edelsteinpreis ist so zu verstehen, daß die Porzellan der Jahreszeiten wieder Weltweit werden kann.

Sie können wählen zwischen Karussellen in allen Größen und Varianten, Eisenbahn, Riesenrad, Schiffe, Schiffe, Zirkus, Theater, Tiere, Kiste & Boxen, Karussellen in allen Größen bis hin zur größten der Welt, Okklava-Fahrzeuge, Wägen, Wägen, usw. usw. Auswahlsysteme zum Thema Jahreszeit & Circus, Spiele und Dekorationsgegenstände für die ganze Familie und Jubiläumsidee, ein tolles Geschenk mit Freude aus der Jubiläumsidee und eine große Auswahl an anderen Karussellen.

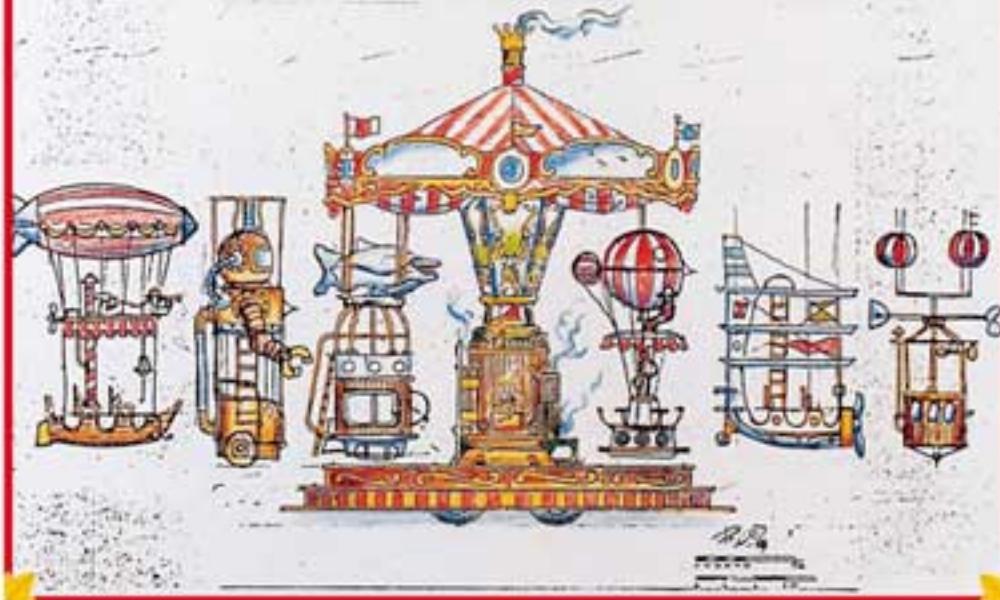

Sie können für einen Tag stehen oder die Statue Eric Staro werden wie Peter ganz eine spezielle Angebot. Schon ab DM 300,- können Sie ein Karussell mieten!

Alle Anlagen sind perfekt ohne weiteren Aufwandsaufwand in einem Selbstverständlich für innen und außen. Wir haben auch eine spezielle "Kaufhausmodell" Reihe konzipiert, die so einfach ist, daß man mit diesen Karussellen im Lebensmittel- oder Spielzeuggeschäft fahren kann!

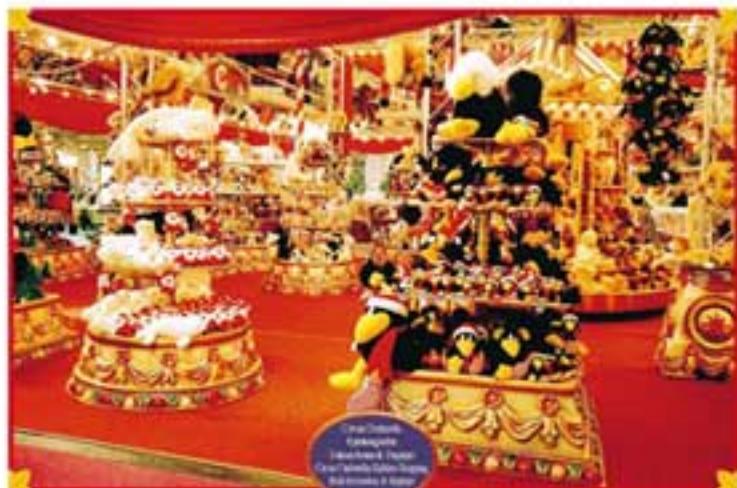

Bei uns erhalten Sie alles aus einer Hand. Auch Konzepte für Freigeblung, Marketing & Handling etc. was wir Ihnen ebenfalls für zur kompletten Geschäftseröffnung. Unsere Alle Aktivitäten sind nicht nur die Karussellen sondern auch die Erwachsenen ergebnisse für uns haben ganz Familien Bienen Spiel an der Front!

The renting of Peter Petz repertoire is the core business of Pleasure For All, the company managed by Geli Petz.
